

WATER SHIELD DRENCHER HOOD

FEATURES

With the advent of the new requirements in fire protection there is a need for water shields over sprinkler heads. When mounted in the past on external walls all sorts of sheet metal devices have been developed or adapted e.g. ant caps or dust pans.

The building owners and architects have not been impressed with these “bits of scrap metal” protruding from their buildings.

The Ducco Hot Dipped Galvanised DN25 x 15 Water Shield Drencher Hood gives a reasonable alternative in a durable ductile iron galvanised product incorporating the pipe fitting and allowing a neat and unobtrusive finish to the outside of the building.

Should you require more information on this product or if you require any other fire protection product that may be hard to obtain or specifically required for this industry please contact this office.

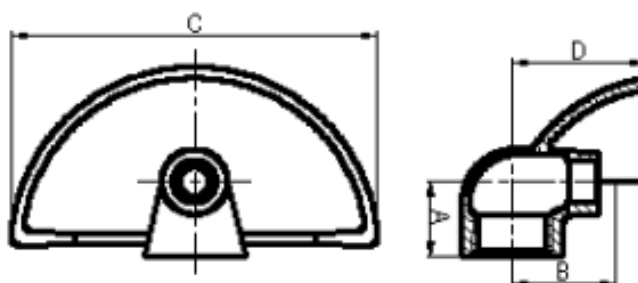

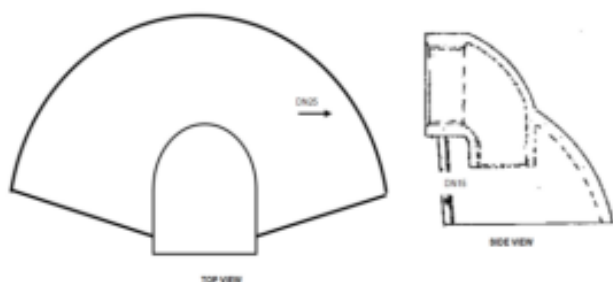

OPTIONS

- Powder Coated Finishes Are Also Available.

TECHNICAL DATA

- Code: FWG-WSDH
- Size Range: DN25 x DN15
